AutoCAD's graphics features and user interface were developed by the Unigraphics Systems Corporation, later acquired by Autodesk. The application was initially aimed at the mechanical design market, and was intended to run on the Xerox Alto, a high-end desktop minicomputer. Autodesk later discontinued the development of further modifications to AutoCAD to improve its performance on minicomputers. Since AutoCAD has been developed as a personal computer application, it can be run on a variety of computer systems and operating systems. As its name implies, AutoCAD is oriented to design workflows using 2D drafting tools and features. These tools include 2D drafting, 3D modeling, and custom applications. It also supports various specialized graphic functions, and operates in "two-sheet" mode for archiving purposes. The application is released in several versions for different operating systems. While AutoCAD can create raster graphics, it is primarily a vector graphics program. Due to its flexibility, AutoCAD has evolved into a wide range of professional and educational software tools, available in stand-alone or server-based editions. Applications A variety of AutoCAD-based professional and educational software is available, including: AutoCAD LT AutoCAD LT is a low-cost, low-performance 2D drawing and drafting software application that runs on 32-bit versions of Microsoft Windows operating systems. A lighter version of AutoCAD, it was initially intended for smaller businesses, students, and hobbyists. It supports most of the same drawing and command features as full AutoCAD. The application is designed to be easily run from portable media such as USB flash drives. AutoCAD LT is available in several editions, including AutoCAD LT 2013 and AutoCAD LT 2018. AutoCAD DWG AutoCAD DWG is a version of AutoCAD primarily for use in the architectural, engineering, and construction (AEC) industries. It runs on 64-bit versions of Microsoft Windows and includes user interface improvements over the AutoCAD 2013 LT applications. It supports most of the same drawing and command features as full AutoCAD. AutoCAD DWG is available in several editions, including AutoCAD DWG 2013 and AutoCAD DWG 2018. AutoCAD Architecture The AutoCAD Architecture product is a suite of AutoCAD software products designed for use by architects and architects'

A total of 49,718 patients underwent epidural anesthesia for operations under general anesthesia. The total incidence of anesthesia mortality was 0.17%. The incidence of anesthesia mortality in patients with the following risk factors was significantly higher than that in patients without these risk factors: ASA class 2, 3; history of cardiovascular or cerebrovascular disease; emergency operation; age, 50-59 years; and epidural anesthesia for more than 2 hours. Among these factors, epidural anesthesia for more than 2 hours was a most important risk factor. Especially, epidural anesthesia for more than 4 hours was an independent risk factor of anesthesia mortality.Q: How to properly transfer information between two processes in the same process group I'm using c++/win32. I have to transfer an int array from one process to another process in the same process group. How do I do it? A: From the docs: If you want to transfer an array of size n between two process in the same process group, use the interprocess_transfer API. If you want to transfer an array of size n between two processes in two different process groups, use the interprocess_exchange API. See the Interprocess::transfer and

Interprocess::exchange functions for more details. Since its inception in 1985, the National Science Foundation's (NSF) Expeditions Program has been a leader in developing long-term, multi-disciplinary research projects in earth and ocean sciences. Now, an ambitious new research initiative is calling for innovative, hands-on, NASA-style teams to create the first "ocean observing systems" in the world's oceans. In a request for proposal (RFP) posted on June 28, the NSF says it will award multi-million dollar grants to teams of eight to 10 students, faculty, or graduate a1d647c40b

I'm relatively new to Silverlight and I'm trying to implement a menu (in a horizontal scroll view) that includes a sub-menu. The menu has only 2 states - opened and closed. The sub-menu is opened on hover, and the arrow is also displayed only on hover (ie. the hover area is shown with a border). When the menu is closed, the sub-menu should also be closed (ie. when the menu is closed, the hover area should go back to its normal state). The problem is that, when the menu is closed, the hover border does not disappear. Here is the link to the demo: The main menu is basically this (the sub-menu has been commented out):
