History In 1982, a software design competition for a new computer-aided design program was held by Autodesk Inc. over 3 months. When Autodesk chose to use Graphisoft, a division of SAP AG as the software design and development partner, Autodesk decided to develop a new program for the 801 microcomputer. However, while working on their own, Autodesk programmers had to use the Graphisoft software. When a disagreement between Autodesk and Graphisoft arose over the terms of the contract, Autodesk published the first copy of AutoCAD Activation Code, a Graphisoft BASIC interpreter, running on its 801 computer. The first commercial version of AutoCAD was released in December 1982. By the mid 1980s, AutoCAD was in use in a wide variety of fields. In June 1985, Autodesk acquired its competitors Synchroline Technology, Inc., Crossline, Inc. and Lastec Corporation, all of whom were involved in development of business-oriented CAD programs. The company grew to become one of the world's largest supplier of engineering, architectural, and technical design software. In November 1986, Autodesk released the first version of AutoCAD for the IBM PC. In 1988, Autodesk acquired Grumman Corporation, a company that primarily designed and manufactured mobile electronics such as marine electronics and air-traffic control systems. With the acquisition of Grumman, Autodesk was able to increase its AutoCAD product line. One of the first CAD programs to feature block-oriented design, AutoCAD was initially a standalone desktop program. Eventually, Autodesk developed the first portable version of AutoCAD in 1989. By 1991, AutoCAD had been designed in such a way that the primary interface was the mouse. As AutoCAD started running on Windows, it became the first product of any kind to run natively on Microsoft's platform. In the late 1980s, Autodesk further increased the popularity of AutoCAD by licensing it to the Japanese Ministry of Economy and Trade, which in turn published a Japanese-language version of AutoCAD. In 1994, Autodesk started bundling AutoCAD with its DWG format files with its software. DWG is a native file format for AutoCAD. In 1997, Autodesk released AutoCAD LT, a version of AutoCAD suitable for the education market, in time for

3D Database AutoCAD includes native support for 3D database publishing to the Internet. Browser AutoCAD includes a web browser which allows web design and access to online web-based information. AutoCAD has been enhanced with many new features in recent releases, including better toolbars, a toolbar component, new zoom and pan methods, support for the WebDAV protocol and Windows Live or Google Live Groups for remote access. Windows Live and Google Live, respectively, are OpenID-based online identity providers. AutoCAD Mobile is a mobile version of AutoCAD which is built for tablets and smartphones and available for both Android and Apple iOS devices. History AutoCAD was originally designed for drafting. In 1992, the first public beta version of AutoCAD was released to the public. The first commercial release was AutoCAD 1993 with support for layers and primitives. Early versions of AutoCAD could use a dBase III or 4 database. In 1993, the first AutoCAD directly used the new dBase III, later replaced by the dBase IV, SQLite and MySQL systems. The AutoCAD VBasic programming language, first introduced in AutoCAD 2000, supported integrated development environments (IDEs) such as Microsoft Visual Basic. AutoCAD 2007 introduced object-oriented programming languages, such as the AutoCAD LT Visual LISP programming language. AutoCAD LT AutoCAD LT was the first product based on ObjectARX. The software was developed to aid with the transition from AutoCAD to ObjectARX. AutoCAD LT (now renamed from Draw to AutoCAD LT) is available in several editions: LT Core, LT Professional, LT Architectural, LT Civil and LT Structural. The software is primarily intended for non-architectural designers. It includes support for Windows Vista, Windows 7, Windows Server 2008 and Windows Server 2008 R2. AutoCAD LT 2014 is based on OpenJRE 1.8 and therefore cannot be installed on Windows XP. The program offers the ability to work with 3D objects such as 2D and 3D drawings. AutoCAD LT allows developers to use external libraries and APIs such as Microsoft.NET and the PHP API. AutoCAD LT is part of the Autodesk Forge platform and can be connected to a database through the Autodesk Forge Data Service. AutoCAD LT can also communicate with third-party software a1d647c40b

Weather Forecast Liberals say Goan independence 'inevitable' Caption: "Pran R. Pereira. PHOTO: SUN NEWSPHOTO.com" New Delhi: The logic that countries such as the USA, China and India can only prosper under a single government system can no longer apply to the situation in Goa as its government has been granted the status of a separate state, according to Goa's outgoing Chief Minister Manohar Parrikar. Parrikar on Friday said the move was inevitable given Goa's strong secular fabric. "Goa's fate lies in its people and the Goan people will have to decide whether they want it to remain a part of India or not. This is a very necessary step," he told a news agency. Parrikar's Goa Forward Party (GFP) won 38 of 47 seats in the recent assembly election in the southern Indian state, ending the ten years in power of the Congress-led alliance. Parrikar, who lost the key north Goa district of North Goa, said he was confident of his party's majority in the next assembly polls due to be held next year. "It is the people of Goa that have elected us. We have worked for the people of Goa and are going to work for them in the future," he told PTI. Parrikar said he had shared his views with the central government and BJP president Rajnath Singh in view of the "national importance" of the decision to grant Goa status as a separate state. It is the people of Goa that have elected us. We have worked for the people of Goa and are going to work for them in the future Parrikar Goa's decision will be a major issue in national elections due in 2014, Parrikar said. "In elections the Prime Minister will speak to the people of Goa. They will decide. We are not afraid of elections.
