DT-172/172TK. Temperature and humidity data loggers. [Read more>>](#).

[Features](#)[Specifications](#)[Application](#)[Accessories](#)[Download](#). Size (HxWxD):94mm x 50mm x 32mm. Operating temperature: -10...+55 °C. Temperature range: -10... +55 °C. Temperature range of humidity: 0... +95 %. Input signal: 4...20 mA. Accuracy: $\pm 0,5$ °C. Storage temperature: -20...+80°C. Storage temperature: -40...+80 °C. Storage temperature: -20...+80 °C. Storage temperature: -20...+80 °C. Storage temperature: -10...+55 °C. Storage temperature: -20...+80 °C. Storage temperature: -20...+80 °C. Temperature range: 0... +55 °C. Temperature range: 0... +55 °C. Temperature range: 0... +95 °C. Temperature range: 0... +95 °C. Input signal: 4-20 mA. Accuracy: $\pm 0,5$ °C. Input signal: 4-20 mA. Accuracy: $\pm 0,5$ °C. Input signal: 20... +55 mA. Accuracy: $\pm 0,5$ °C. Input signal: 4-20 mA. Accuracy: $\pm 0,5$ °C. Input signal: 20... 60 mV or 4... 20 mV (via potentiometer on the front panel). Measuring range: 30... 550 mV (via front panel potentiometer). Accuracy: $\pm 0,5$ °C. Input signal: 20... 60 mV or 4... 20 mV (via front panel potentiometer). Accuracy: $\pm 0,5$ °C.

Thermometer TShMP-2 is designed to measure the temperature of liquid and gaseous media that are not aggressive to copper alloys. The principle of operation of the thermometer is based on the dependence of the dielectric permittivity of the material on the temperature. The thermometer measures temperature using three pairs of load cells mounted in two planes. Two pairs of load cells are located in the upper and lower planes, and the third pair is located in the middle plane. Each pair of load cells is connected to an analog or digital I2C output. The temperature of the medium is determined by the difference between the measurement values in the upper and lower planes. Devices have metal case IP 65 according to GOST 14254-96 and designed to work in the temperature range from -20 to +60 °C. Load cells have the certificates of explosion protection from BISS and are certified as measuring instruments. They can be used at the enterprises where it is required to control the parameters connected with chemical, radiation and biological influence on the person. Load cells and temperature sensors have two versions: single-point and multi-point. In the first case, the measured pressure is applied in one point, in the second - in several points. By design, pressure and temperature load cells can be of two types: with an elastic membrane (membrane) and without it (membrane-less). Diaphragmless pressure sensors have no moving parts. Diaphragm-type pressure sensors use a membrane as a sensing element. Such pressure sensors are the most expensive, but their advantages justify the high price.
