Chitin fibers with excellent mechanical properties are ideal candidates for tissue engineering. However, their poor degradation properties limit their applications. Poly-L-lysine (PLL) is one of the most widely used amino acids in biotechnologies because of its excellent properties, such as biocompatibility and biodegradability. This study synthesized PLL-modified chitin nanofibers by electrospinning and evaluated the physicochemical properties and degradation behaviors. Electrospun nanofibers modified with different proportions of PLL were successfully fabricated. The addition of PLL could improve the degree of dispersion of chitin nanofibers and decrease their diameter. The diameter distribution of the fibers had no significant change. The mechanical strength of chitin nanofibers was not significantly changed after modifying with PLL. The degradation speed of chitin nanofibers increased with the addition of PLL. The degradation rate decreased significantly in the presence of more PLL. The cellular experiments on human umbilical vein endothelial cells (HUVECs) demonstrated that PLL-modified chitin nanofibers had excellent biocompatibility. In addition, the modified chitin nanofibers could accelerate the recovery of HUVECs from mechanical injury. The biology of the toxin beta-toxin of Clostridium septicum. Clostridium septicum beta-toxin is a phospholipase A2 which destroys muscle tissue by degrading the phospholipid membrane of the muscle cell. We studied the physical and enzymic properties of the toxin. The toxin is a single polypeptide and its amino acid sequence has been determined. The number of amino acids and the molecular weight of the toxin are 275 and 32,778 respectively. The amino acid composition is not similar to that of any other known lipolytic enzymes. The specific activity of the toxin is very low (2 nmol/min/mg); the catalytic reaction is studied by measuring the time of formation of 1,2-dipalmitoyl-sn

Simply type your paragraphs or load them from a file saved to your PC, and the original text will instantly be displayed at the top of the main window. In case you want to edit it, you can do that right in the dedicated field, while removing it altogether can also be easily done by clicking on the "Clear Text" button. Perform a host of editing tasks Other than that, you have to select the type of manipulation you want your text to undergo, and you are done. The operations to undertake are quite varied, and they let you do all sorts of changes to your text. You can, among others, remove line breaks, duplicate lines or lines containing a specific word or phrase, you can assign a number to each line, convert the entire text in either lowercase or uppercase letters, merge text, or add line breaks after each occurrence of a textual element. The list of editing capabilities is, however, much longer, and we should also mention that this tool also functions 6a5afdab4c

1. Field of the Invention The present invention relates to a guide bushing used for nuclear power plants or the like, which is in particular used for a guide bushing between an inner frame and an outer frame.
2. Description of the Prior Art In order to conduct various kinds of work such as replacement of a fuel in a nuclear power plant, or an inspection or cleaning operation of a reactor vessel, a guide bushing for guiding a tool or a pipe has to be mounted at an opening formed at a desired position of a frame member of the nuclear power plant. FIG. 10 shows the appearance of a conventional guide bushing 3. The guide bushing 3 is constructed of an inner frame 1 and an outer frame 2, and has a guide bore 5 for allowing a tool or a pipe to pass therethrough. The guide bushing 3 is mounted in a reactor vessel or the like of the nuclear power plant. The guide bore 5 has a circular cross-section at an outer peripheral surface, and is formed to have a large diameter at an inner peripheral surface. The guide bushing 3 is inserted into the frame member by a lubricant filled in the guide bushing 3. Therefore, by filling the lubricant in the guide bore 5, movement of the guide bushing 3 in the frame member is prevented, and the guide bushing 3 is fixed to the frame
