## Wireless Meter Crack

Wireless Meter is a widget that shows the network name and WiFi signal strength on your desktop. You can use it to easily monitor your network signal, especially if you know it's weak. The tool is simple to install and configure. The interface of the tool is represented by a regular, semi-transparent frame, with a light grey background. It automatically reveals the current network name and WiFi signal in percentage. By accessing the Widget Preferences area from the right-click menu, you can change the default text and title colors. Unfortunately, Wireless Meter doesn't sport any other configuration settings of its own. However, thanks to the default options provided by the Yahoo! Widget Engine, you can set the frame to stay on top or below all the other windows, to ignore mouse events and to prevent dragging. It is also possible to adjust its opacity level to a preset value between 20% and 100%. Wireless Meter is very low-demanding when it comes to the CPU and RAM, so it doesn't interrupt user activity. It has a good response time and works well, without causing the OS to hang, crash or pop up error dialogs. We have not encountered any issues in our tests. Unfortunately, Wireless Meter has not been updated for a long while. ... ## Wireless Meter Crack

Lite and clean widget that is small in size, lightweight and resizing-friendly. Report issues here: NOTE: In order to avoid display of your network info on all computers, you need to place your wireless meter on the desktop of each device. Display network status for your WiFi connection on your desktop. Download, extract and install. After installing, open the widget and select a connection. Tested on Windows 7 and Windows 8. Wireless meter will appear on the desktop, indicating signal strength, signal quality and network name. The network name is displayed by default. You can configure the widget to display the signal strength in % and network name as well. With wireless meter you can get the best possible WiFi signal from your router, or monitor your connection. By default, it will use the Bluetooth stack. If you select your network connection in Settings -> Network -> WiFi and select it, it will use your currently selected connection. To use the interface of the widget, you can right-click the desktop, select "Wireless Meter" and select a connection. The widget has 4 different modes: 1. Show Signal - shows just the network name and signal strength 2. Show Signal and Name - shows just the network name 3. Show Signal and Name (Background) - shows just the network name 4. Show Signal, Name and Percentage - shows just the network name You can select to have the widget to be fixed to your desktop, follow your cursor and ignore mouse clicks and keyboard events. The widget is intended to work with Windows 7, 8, 8.1 and 10. Installation:
