Free and Trial The free version of AutoCAD Cracked Accounts is labeled AutoCAD LT. It contains basic tools to view, draw, annotate, and modify 2D objects. A limited 3D model is available, with dimensions and tables. A separate trial version is available for up to 30 days. The full-featured version of AutoCAD is labeled AutoCAD Premier. It includes many of the tools and functions available in AutoCAD LT. A separate trial version is available for up to 30 days. For some purposes, AutoCAD LT can be used in place of AutoCAD. In other instances, AutoCAD LT requires the use of AutoCAD Premier. AutoCAD LT can also be used as a stand-alone program. AutoCAD LT is primarily designed to view, create, and modify 2D objects such as 2D plans, elevation models, and architectural drawings. For some drawing applications, the 2D viewports support a third dimension (depth) similar to the viewports of a drafting table. However, the AutoCAD feature set is not comprehensive enough to cover the full range of architectural design-related tasks. For these cases, it is recommended that a complete CAD package be used. With the exception of the AutoCAD LT Basic Edition, AutoCAD Premier includes a 3D modeler as part of the application. This feature enables creation of solids and meshes, and it can be used to display 3D surfaces in the 2D drafting viewports. There are also some significant differences between AutoCAD LT and AutoCAD Premier regarding dimensioning, tables, and mechanical drawing capabilities. AutoCAD is also available as a desktop-based web app. In these cases, a local installation of the software is not necessary. The software can be accessed from any computer browser, and AutoCAD can be started directly from the browser. AutoCAD LT Basic Edition can be used as a web-based or desktop app. A web-based version is available for a monthly subscription fee. AutoCAD LT Basic Edition requires a local installation. AutoCAD LT Basic Edition can be run as a stand-alone app. There is also a trial version available for 30 days. AutoCAD is available for the Mac, Windows, and Linux operating systems. Although the primary market for AutoCAD is commercial architecture and engineering design, it is also useful for non-

The struggle over whether to keep or nix the Confederate battle flag that flies over South Carolina's statehouse gained new energy last week after a woman was fatally shot at a political rally where the flag was on display. Democratic state Sen. Vincent Sheheen, whose brother, Robert, was killed during the Sept. 12 rally, announced last Friday that the state's General Assembly will take up the flag's fate next month. In the meantime, South Carolina's Republican governor is calling for the flag to be taken down from the statehouse grounds, as The New York Times reported Sunday. "I'm troubled to have a general assembly that wants to keep the flag, a general assembly that doesn't know history," Gov. Nikki Haley told the Associated Press. The killing of the 28-year-old woman, who was shot by a man on a motorcycle, is being investigated as a possible hate crime. Dylann Roof is being charged with murder. The state flags of several Southern states also are under scrutiny. The flags of Mississippi and Alabama have been a lightning rod of controversy recently over the Confederate battle flag. South Carolina's flag is a palmetto tree with the Confederate battle emblem, and it has been the focus of years of debate over whether the emblem is offensive. Other states' flags, including those of Florida, Virginia, Georgia, Louisiana and Tennessee, have also come under the spotlight for their battle flags. There's no word on the fate of those flags, although Alabama's flag has been taken down in recent days. The Associated Press contributed to this report. the final solution for cleaning dirty diapers, etc. A bag of fluid soap. For washing and brushing teeth, or cleansing nits and lice. Q: Change the first position when using ng-repeat I have the following html : {{ post.title }} I want to change the first 's class, I tried : {{ post.title }} And in my css : .first-title:first-child {} But it didn't work. A: You can try this: {{ post.title }} .media-body > h4 { margin-top:0px!important; } A: It's better to make a custom directive instead of trying to apply CSS selectors, the method is already provided in the AngularJS documentation Here is a basic example: angular.module('app', []).directive('firstTitle', function() { return { restrict: 'A', link: function(\$scope, Selement, Sattrs) { var value = Sattrs.firstTitle; Selement.css('margin-top',value); } }; }); Example here Gastrointestinal bleeding as a first manifestation of acute pancreatitis: the role of endoscopy. To assess the diagnostic value of endoscopy in the early diagnosis of acute pancreatitis with gastrointestinal (GI) bleeding. Nineteen patients with a history of acute pancreatitis and acute GI bleeding were retrospectively analyzed. The diagnosis of acute pancreatitis was based on persistent elevation of pancreatic
