## Clear My History Crack X64

Clear My History is a lightweight but powerful utility for cleaning a variety of program-related data. By default, it removes Internet Explorer's history, index, temp and cache files, cookies, temporary web passwords, preferences and passwords from Mozilla Firefox and Opera, as well as Google Desktop's

---

stored passwords. It can also be used to clean your entire system in terms of history, temp and cookies, or all the specific locations where you usually store your data. It doesn't require any administrator rights. The software is freeware, ad-supported and it runs on Windows XP/Vista/7/8/10 systems.

easy to use, lightweight utility designed to clear browsing history, Internet history, cookies, temporary files, and a wide variety of other information from supported browsers and computers. Off Usability: A little old, but lightweight. Negative Nice GUI, but it's not that effective.

Recommendations to other buyers: If you're looking for a simple, lightweight, well-designed

---

application, you should check Clear My History out. Advantages of using Clear My History This is a simple to use utility that works on all supported browsers and systems. There are no add-ins, patches or special downloads required. Disadvantages of using Clear My History Clear My History does not have a lot of extras to offer. Other Thoughts: I usually use McAfee's Anti-Spyware, Spybot and Spyware

---

Doctor, but none of them will clean all of the unwanted things on the Internet. I like that Clear My History will do that on a broad level. Was this review helpful? ## What's New In?

ClearMyHistory lets you delete Internet history, temporary files, browsing history, downloaded files and cache. You can also set a time limit for Internet history, clean browsing history from Firefox, IE and Chrome and remove cookies, passwords, and other personal information from them. The Yahoo! Mail app on Windows Phone is nice.

---

It has strong voice recognition for things like "Reply All" and "Reply All". It's a great app for the most part and is quite usable on this platform. However, the app has become pretty buggy lately. There are many little issues and some of them don't get fixed. As of writing this review, I've been on this app for about a month and I've encountered at least 6 issues with it that have not been fixed or updated. Now, that's

---

not to say that these bugs aren't a great inconvenience. But there are several others that don't seem to have any way of being fixed at all. The #1 thing in this list is a big one, and it has been a huge problem since it was released: It's really hard to reply to a message. There are many issues here, from it not recognizing the word "Message" and not understanding it when I'm in the right place, to not understanding that

---

my reply was to an email and not a text message. This last one is really frustrating, because you have to go out of the app and reply to an email, only to have to come back in again and then you have to repeat it all over again. There are more, but these are the most common issues. The other issues I have encountered with this app are: 1. It doesn't read my account information from the online account. If I sign in to my

---

mail in any way, it keeps asking me to sign in again even though I'm already signed in. This has happened to me probably at least 3 times. 2. Sometimes the app seems to think I'm replying to an email, but all I'm doing is replying to a text message. 3. Sometimes when you go into a list of emails, the name that is written in the message itself is not the name of the email, but the address. I'm assuming this is because the app

---

sometimes chooses the address instead of the name of the email. I have another list where the name of the email is written in the name of the email. 4. It's really difficult to get the photos out of the app. I have tried 3 times. Each time, I have to either type the name of the person, or tell it to choose from the entire library. And then I have to wait and hope that the photos will appear in my photos app. It never does. 5. The

---

app doesn't have an easy way to switch between accounts. If I use the app on my home account and then use another account in the app, the app still thinks it's on
