lexiCan is a handy tool that can help you organize information into various projects and can generate a variety of documents, such as books, magazines, notes, web pages, books and so on. It offers a wide array of functions and has a rather cluttered and outdated interface. Create articles and attach various objects To begin with, you can create a new project and assign it multiple sub-articles. Then, you can use the application's Versioning function to keep track of modifications made to your documents. It is possible to attach any type of file to a particular article. You can either save the file in the

current project folder or insert only a link to the desired document. These are then displayed in a separate panel and can easily be accessed when you open a specific article. You can also assign references, using one of the many included templates, suitable for books, web pages, magazine articles and book sections. Additionally, tags can be associated to certain projects, making it easier to find useful information in the future. Export article to multiple formats

The application allows you to save projects to Microsoft Word documents, PDF, TXT, RTF and HTML files. You can choose to export only the current article or the entire project and have the program automatically create a

bibliography. Additionally, it is possible to create a hierarchical folder structure containing all the project's articles, save them to HTML formatted files that can be used in web pages and even export articles to Microsoft HTML Help files. The program also enables you to quickly print various items in your project, such as the current article, the outline, index or bibliography. Unimpressive interface

While lexiCan offers a great deal of useful functions, they can often be difficult to locate and access, as the application's interface is rather cluttered and not very intuitive, as well as somewhat outdated. All in all, this is a useful program, designed to help you organize and cross-link various types of

information, then export data to multiple file formats. Nitrogen trifluoride Nitrogen trifluoride is an inorganic compound with the formula N_2F_3 . It is a colorless gas with the smell of garlic. Synthesis Nitrogen trifluoride may be formed from nitrogen tetrafluoride and fluorine gas:

Q: Convert dataframe to dictionary using pivot

I have a dataframe like below, in which I have to convert the columns as column title and values as values corresponding to column title

Output should be a dictionary like below

I can go for column level pivot, but do not know how to do the row level values in the new column

This is what I did so far

```
df = pd.DataFrame(data = dict(A = ['S', 'P', 'C'], B = [16, 2, 1], C = ['a', 'b', 'c']), columns=['A', 'B', 'C'])
```

```
import pandas as pd
import numpy as np
```

```
def column_level_pivot(df):

This tool can be used to search multiple archives and databases (such as Wikipedia, Wikibooks and FreeDictionary) and be used on mobile devices to access your content anywhere and anytime. Synchronize articles between different databases and complete the content. Atom entries and references can be used to link content To illustrate, the user can create a single article and its sections will be imported into the database (eg. Wikipedia), or can create an article from scratch in a single database (eg. Wikibooks). As a second example, the article can be synchronized with

another database, for example, FreeDictionary. Once the synchronization is complete, the user can search the created entries in the other database using the search function and add comments to it. Database integration is also possible, allowing you to import the articles created in another database into your own (eg. creating an RSS feed of an article from another database). Additionally, the reference of the content can be stored and synchronized with the database and file structure. Export the information to various file formats A variety of export formats are supported. These include the following: RSS feeds, so it is possible to subscribe to the updates and create an RSS feed of your articles Excel

documents (which can be used to create various statistics and other summaries)
Word Documents (for easy creation of outlines, citations, and reference data)
HTML pages The program is also able to completely scan and index all the articles in your selected databases Create web pages, booklets or reports The program's integrated RSS feature allows you to create web pages, booklets, reports or other documents automatically, using the content imported from one of the databases. This feature is especially useful for creating individual reports based on a particular database, or for having a single page of information available in multiple formats (eg. PDF, HTML). Import RSS feeds from your

selected database and documents It is possible to import RSS feeds from selected databases and documents and to search articles in those databases using a feed reader program. Full text search function The interface is designed to be intuitive and helpful. Platform: Desktop, Windows, Mac OS X, Linux What's New: An update has been released. lexiCan Review LexiCan is a useful tool that can help you organize information into multiple projects and assign references, links, tags or various types of data.
