Start Autocad and select Build Settings from the File menu. Click on Build Parameters from the Parameter panel. In the new window, change the parameter Name to APP_VERSION and the value to the new version number. For example, if the new version is 17.01, you should change the parameter value to 1701. Save the file to your hard drive. . If you have access to another computer, you can copy the build settings file from that computer to the current computer that has Autodesk Autocad installed. (There is a built-in option to download the settings file when you save the file.) After you have updated the version number and saved it, you can close the Build Settings window. Go back to the menu window (File, Edit, etc.) and choose Build. The build should succeed. Building with the command line The command line can also be used to build with a new version of Autodesk Autocad. Open a Command Prompt (Start | Run | CMD, right-click, Run as administrator) and enter the following commands: autocad.exe build APP_VERSION Where APP_VERSION is the version of Autodesk Autocad you are updating to and where you saved the new build settings file that you downloaded in the previous section. If you receive an error message like this one: ERROR: Could not create build data file: file not found for parameter name: [APP_VERSION]: The build may fail with errors because it's looking for the file on the local hard drive. In the future, if you get this error message, there may be a reason why the file is missing. If you get the file is not found for parameter name error message and it's on the local hard drive, you may need to go to File | Build Parameters and change the default value. 2.
