AutoCAD is part of the Autodesk 2D software family, which also includes Acrobat (PDF conversion) and AutoCAD LT (primarily a low-cost consumer app). AutoCAD is the second-most-popular CAD program in the world, after competitor SolidWorks. At the end of 2017, AutoCAD had a 70% market share of the CAD market. As some may have already heard, AutoCAD is getting a big update soon. The new 2018.1 release, which was announced earlier this month, is the biggest update since AutoCAD 2014. The update, which is codenamed "REL 18.1" internally, is based on the 2016 release of AutoCAD LT, and brings significant new capabilities, performance improvements, and new features. I recently got my hands on a beta of the new release, and it's available for anyone who wants to download it now. The current version is now 18.0, and the first 18.1 beta version is already available to AutoCAD 2018 users. The new AutoCAD 2018.1 update is very different from the other major 2018.0 releases, like AutoCAD LT 2018 or 2017, because it was built from scratch to incorporate the new 2018 release of AutoCAD LT. It's a complete overhaul, with new user interface changes, new features, and updated code. It also brings the new features of 2018 release of AutoCAD LT to AutoCAD users. You can read more about the new release in a blog post I wrote earlier this month, but I've got plenty of new videos to show you as well. Over the next few days and weeks, I'll be working with a small group of beta testers to run through the first two big features of the new release: the Trackplane and the Mesh Alignment tools. The third big feature, which is in my opinion the most important one, is called Mesh Templates, and it's very similar to the Object Templates available in other CAD programs like SolidWorks. I'll show you how to create Mesh Templates using the new Mesh Alignment tools in the next video. The rest of the new release comes with new UI, performance improvements, and new
