Starting with AutoCAD 2017, the ObjectARX library and the .NET library are the only user-facing way of programming within AutoCAD. ObjectARX can be accessed using Visual Studio, Visual Studio for Mac, Code::Blocks, the Microsoft SDK, the .NET Framework, or Microsoft's C++ compiler, and AutoLISP is available in later versions of AutoCAD. ObjectARX allows the programming of AutoCAD extension applications using a combination of C++ and native code and is integrated with the user interface. It supports additional use cases, such as the ability to override other toolbars, menus and objects, and the creation of custom applications. Another extension is the ObjectARX API for AutoCAD, which is used for compiling object-oriented C++ extensions. XDCE XDCE was introduced in AutoCAD 2016 and offers the ability to use external programming languages to create extensions for AutoCAD. It uses the .NET library and was first introduced in AutoCAD 2013. In AutoCAD 2016 it was moved from the Plug-ins folder to a

separate folder called XDCE. Functionality AutoCAD programs are organized into extensions. Every file begins with the.lpp or.lpx file extension. An extension is defined in a.lpi file with a list of namespaces and classes. Visual LISP Visual LISP (Visual BASIC for AutoCAD) is a proprietary extension language introduced with AutoCAD 2009. It is similar to the visual BASIC scripting language but is compatible with the.NET Framework, and provides additional features. It is developed in Visual BASIC but is not a Visual BASIC compiler, and users have to compile Visual LISP programs themselves. Unlike Visual BASIC, Visual LISP programs are not loaded or saved with AutoCAD. Visual LISP scripts are stored in a script file with the.lps extension. These scripts are stored in the AutoCAD application directory in either.lpl or.sln format. For example, if a Visual LISP script is saved as filename.lps it will be stored in the application directory with the extension.lpl. Visual LISP programs are sometimes referred to as XLISP. XLISP is a proprietary extension language that is backwards compatible with Visual LISP. The ability to run Visual LISP scripts is very limited, ca3bfb1094

Q: How to create a click event using onclick attribute in svg How do I create a click event for an svg element, using an onclick attribute like shown below Click me I tried various combinations of code in html, but it did not work. Click me Click me A: I suggest you use event listener with the click event. By using this you can have the event listener on only the div/button/other element you want, as the listener will still be attached to all the descendant elements. // Listener for all `*` elements

```
document.querySelectorAll('*').forEach((el) => { el.addEventListener('click', function () { alert('An alert box!'); }); });

Give drawings your own look with the new AutoStyle settings. Style sets, such as the new crosshatch style or hatchet face style, are easier to set in the command line or using the NEW command. (video: 1:48 min.) Quickly get to where you need to be by opening the right drawing while browsing for something else. Find a drawing, either by its name or by browsing your library or AutoCAD 360, and then click an icon to open it from the "Next" or "Previous" panel. This also makes it easier to access larger libraries and collections. (video: 1:15 min.) Add a new drawing to your drawing list without opening it. Drag and drop files into your drawing list with a single drag of your mouse. (video: 1:12 min.) A smart drawing

feature ensures that you'll never lose your place. And if you do, you can quickly go back. Whenever you move to a different drawing or page, your drawing will snap to the place where you left off. Now when you want to have a drawing open on more than one computer, you can just open the drawing from a shared folder or a shared drive. Now when you're looking for a file that you've saved, you can quickly open a specific folder and then work in that folder, without having to open all your other work files, too. (video: 1:19 min.) Getting started: The new Get Started tab puts all of the options you need for getting started, right where you need them. Start your drawing with a simple click, choose your drawing parameters, enter a drawing name, and click Start. This tab is where you can manage your drawings and other items, add drawings to the clipboard, and browse through any of your folders or drawing libraries. Sharing work: Send drawings or link drawings to a colleague or to a digital sharing service such as Dropbox or Google Drive. Send drawings to multiple recipients at once by dragging the shared link into a new drawing, or drag a shared link to open a shared drawing. (video: 1:18 min.) Share drawings with other users in your organization. You can control which users can view and modify a drawing, set expiration dates, and get real-time notifications when a drawing is opened or modified. (video: 1:30 min.)
