Import data from other applications or cloud storage, and monitor real-time changes to your design. Create files in PDF format for print layouts. Enhance the transparency and color capabilities of diagrams, and render 3D polyline and polygonal elements in a similar style as 2D lines and polygons. Automatic snapping for new drawings. Simplify the creation of new object types for physical modeling and drafting. Various Drawing Tools: Convert any drawing object to a smart object (such as a path, ellipse, polyline, or circle). Drag multiple object types onto a single object, group, or drawing area to make a compound object. Convert and display group objects as ellipses, circles, and other shape objects. Use mirroring and rotation tools to create complex shapes. Hover over a group and choose the path or sketch tool to edit the group's settings. A new "Make Reference" feature lets you quickly design new objects by drawing over existing geometry, and automatically creates a new group object that includes that geometry. Draw and edit in 3D. Draw and edit 3D objects directly in drawings. Unified 3D and Sketchbook The new Unified 3D and Sketchbook features let you create a 3D model from a 2D sketch. With the new "Make Reference" feature, you can quickly create a 3D model of any existing 2D sketch or symbol. The Unified 3D and Sketchbook tools also include new features for viewing, editing, and manipulating 3D and 2D objects. Draw and edit 3D objects in the same environment as 2D geometry. Hover over a 3D object to show its properties, rotate it, move it, and scale it. Select objects in the model, and automatically update all other objects, including 2D geometry. Draw and edit 2D sketches in the same environment as 3D geometry. Import and Edit a BIM Model Import existing BIM data directly into your drawings with
