In general, VGCC are multi-subunit membrane proteins that include an alpha1, alpha2, beta and delta subunit. There are three main classes of VGCC: L-, T- and N-type. The L-type, the most widely studied, is encoded by CACNA1S, while T- and N-type channels are encoded by CACNA1A, CACNB1 and CACNB4, respectively. These channels are made up of a1, alpha2/delta, beta and a2 subunits. VGCC are expressed in many different kinds of cells throughout the nervous system (where they control cellular excitability) and in
