Technical Field The present invention relates to a liquid crystal display. (b) Discussion of the Related
Art A liquid crystal display includes two panels provided with field generating electrodes such as
pixel electrodes and a common electrode, a liquid crystal layer having dielectric anisotropy, and a
backlight unit. The two panels are provided with the field generating electrodes such as pixel
electrodes and common electrode, and are provided to be attached to each other in such a manner
that the pixel electrodes and common electrode face each other. The pixel electrodes and the
common electrode are supplied with electric signals, thereby generating an electric field in the liquid
crystal layer. The strength of the electric field determines the polarization of liquid crystal molecules
in the liquid crystal layer, and an amount of light that
