What's New in the?

ISpy Keystroke Spy is the most advanced keystroke logging software on the market. There's nothing else like it. Program allows to log and track every single keystroke typed by any Windows user on a local or remote PC, no matter whether it's in a standard or Windows application. You can collect all of this information via email using simple in-program messages. This spy also can record various actions performed on your PC, for example, screenshots or videos capture. All these functions are offered at no cost at all. ISpy Keystroke Spy runs in total stealth. There's no software to install, no registration and no sign of installation. Installation is performed in background. Also, you can view keystroke logs offline. You can read all details regarding your activity in spy's interface. You may have a possibility to save these logs as text files. ISpy Keystroke Spy's interface looks really simple and attractive. Nevertheless, everything else is hidden under the hood of the program. It is lightweight and doesn't take much computer memory. This spy software utilizes a powerful algorithm with a large amount of memory. Moreover, it can collect all keystroke logs generated by computers. This program can control all applications installed on target computer. All of these functions can be performed at your discretion or at the scheduled time. Key features: - You can view all keylogs in spy's console, read them with spy's built-in text editor. - You can receive email notifications whenever any specific keystroke appears in your target's computer. - ISpy Keystroke Spy runs in total stealth mode. There's no icon or anything else that indicates it's spying. - You can enter password to activate program, and view all logs - You can define time intervals between backups, you can choose between local and remote backups. - You can view all collected screenshots on the same PC, or transfer them to your email. - You can create unlimited tasks and define time intervals between them. - You can schedule all tasks to run after rebooting and even at a scheduled time. - You can define time intervals between keystroke logs backups. - You can manually or automatically clean all captures. - You can set ISpy Keystroke Spy to be a system process and hide it in Windows Task Manager. - You can clean all captured screenshots. - You can set keys not to be captured. - You can monitor all activity of the keylogger application. - You can view all captured screenshots
