x-Speed.net - Free Hosting Control Panel Control your web hosting, set up your email account, or even manage your ftp account, all with just a few clicks. We offer a free version and an enterprise version, which can be customized based on your web hosting needs. Virus Help Screen This is a web-based screening application, which can be accessed by all your users over the internet by entering the full URL of your virus screen in the Web Browser of the user. If the user clicks the button "Start", the user will be automatically redirected to the Virus Screen. Easy to use for your visitors - They only need a internet connection and your visitors will automatically be redirected. Even a novice user can access the virus check by using this system, without having any technical knowledge. Your visitors will not even know that they are visiting a virus scanner. So why should you use other software? Easy to install and use - No technical knowledge is required to use the software. A click of the mouse is all that is required to start the system! This software has been developed for use with our website products. It will detect any potential threat and what will be done is that the users will be prevented from connecting to our servers and websites. If you want to use this software on a private server you can without problem. After installing it, you will find under the "control panel" that there is a configuration panel. When you activate this software, the configuration will be done automatically. Please make sure that the IP address that the software is listening is the same IP address that is on the main server. Yes! With Varnish Cache, web pages will be much faster. The reason is because every time a visitor arrives at your website, the request is sent to the web server, which then send the request to Varnish Cache. This means that less requests need to be sent to the web server, which thus can do other tasks. Actually, a "Proxy Server" usually works in conjunction with the Varnish Cache in order to make the connection between the web server and the visitor. This means that a request will be sent directly to the Varnish Cache, and at the same time a request will be sent to the Proxy server. The idea is that the Proxy server serves your visitor and forwards the request to the Varnish Cache, and the Varnish Cache sends a response directly to the visitor. This can be
