Brachial artery thrombosis causing complete brachial plexus avulsion. Numerous etiologies have been reported for complete brachial plexus avulsion, including fracture of the shoulder, neck, and clavicle; tumor, infection, congenital anomaly, and trauma. Although arterial thrombosis is a well-recognized cause of peripheral artery occlusive disease, it is a less common cause of complete brachial plexus avulsion. A case of complete brachial plexus avulsion caused by a thrombosis in a patient with a history of thyroid carcinoma is presented. A computed tomographic angiography study confirmed the diagnosis. Extensive investigation revealed no other cause of thrombosis. Brachial plexus surgery resulted in rapid recovery.

The program allows you to edit the shapes with the mouse or by entering the parameters from the keyboard for increased precision. You can also use it to calculate hydrostatic parameters and to analyze them. Convenient to import data from the 3D software and from many other applications, PROLINES can import and calculate any type of data you need. To change the shape of the hull or sails after its creation, you can bring them back to their original shape and appearance. PROLINES includes all the tools you need to create a real professional model, as well as a detailed technical documentation that will help you increase the efficiency of your modeling and data processing. Thanks to Cross for the tip. This software is a fairly good deal for what it is. The main problem with it is that you need to have the original photo/scans to get the best results. This means if you want to do it for a client (I'd charge them per project like any good modeler) then you have to get scans done. If you are into scanning yourself then you can probably get away with it, but it also means if you ever want to take the model somewhere else for reproduction you'll have to do it again. It's possible to import your original scans using the import script but you have to have the original scanned at the right scale. It is also worthwhile having your original scanned at very high resolution. But overall this program is excellent for what it is and I would personally recommend it to anyone wanting to try their hand at creating their own custom designs. One other side note. You have to have 2GB+ of RAM and a decent PC to run this. It does require some CPU juice but it runs very well on a low end PC.

Studying the cytotoxicity and apoptosis of the cardiotoxic drug ouabain. The cardiotoxic drug ouabain is one of the most important cardiac glycosides used in clinic. It is cytotoxic for normal and tumor cells, including cardiomyocytes. However, at the molecular level, little is known about its mode of action. A main obstacle to a detailed picture of ouabain action is the lack of information on the cardiotoxic action of this drug. The aim of
