Contents History [edit] AutoCAD history [edit] For most of the history of AutoCAD, the development of the program was managed by one of Autodesk's two design studios, the Systems Design Group (SDG) and the Add-On Development Group (AOD). The program was originally developed by SDG and ran on MS-DOS based minicomputers like the DEC VAX and the Hewlett-Packard HP3000, and was available as a self-contained DOS application or as an add-on to the HP 3000 operating system. The first development of AutoCAD was led by engineer Henry Baker, who had worked at Unigraphics. After a sabbatical, he returned to work at Unigraphics and later left again to found his own company, Baker & Co., to develop CAD software. In May 1982, the first version of AutoCAD was released by Baker & Co. and the HP 3000 computers. This version was delivered on magnetic media and included a unique predecessor to what became a trademark of the software, the Draw.com line-by-line capability (as shown below). The "Doc" series of AutoCAD were among the first products sold by Autodesk and delivered the software as an add-on to the existing HP 3000 operating system. This was because HP 3000 was the best platform to run the software. In the early days of AutoCAD, the program was referred to as "Doc" and the company was known as Doc Systems. Later, Autodesk changed the company name from Doc Systems to Autodesk and started marketing software applications under the Autodesk brand. The first to use the "Auto" prefix was a program developed by Autodesk in the 1970s called AutoCAD, a high-performance graphics system for the SDS Sigma-7 high-speed vector graphics computer produced by the company Computervision. Originally developed to create "windshield" symbols, the program quickly gained popularity as a professional, multi-user, computer-aided design and drafting package. It was renamed AutoCAD in 1981. In 1984, Autodesk released a version for the MS-DOS platform, which used the proprietary ToolBox extension language and supported hardware graphics for the IBM PC DOS 3.3 operating system. Version 1.0 [edit] Autodesk introduced AutoCAD to the market with version 1
