Description of the Related Art The conventional keyboard or keypad may include a keycap and a supporting frame, and a circuit board is installed in the supporting frame. A plurality of elastic members is formed to cover the surface of the keycap. In the state that the keycap is pressed, the keyboard or keypad is electrically connected to a flat panel display via the circuit board. Referring to FIG. 6, a conventional keyboard or keypad 10 is shown. The keyboard or keypad 10 includes a keycap 12, a supporting frame 14, a circuit board 16, a flat panel display 18, and a plurality of elastic members 20. The keycap 12, the supporting frame 14, the circuit board 16 and the flat panel display 18 are assembled together. The elastic members 20 are respectively disposed on the supporting frame 14 and are formed to cover the surface of the keycap 12. An end of the circuit board 16 is electrically connected to a flat panel display 18 via a plurality of conductive elements 22, and the other end of the circuit board 16 is electrically connected to a touch circuit 24 via a plurality of conductive elements 26. The touch circuit 24 is electrically connected to the flat panel display 18. The conductive elements 22 and 26 are formed on the circuit board 16, and the conductive elements 22 and 26 are further formed on the supporting frame 14 and are electrically connected to the keycap 12 and the flat panel display 18, respectively. In the state that the keycap 12 is pressed, a circuit at the circuit board 16 is electrically connected to a circuit of the flat panel display 18 via the conductive elements 22 and 26, so that the circuit board 16 is determined as a touch area. During the assembling process of the conventional keyboard or keypad 10, the elastic members 20 may not be disposed on the supporting frame 14 and may be welded to the supporting frame 14. As a result, the conductive elements 22 and 26 are unable to electrically connect to the circuit board 16 and the flat
