I was told that the error is in my code on line 69. A: I can reproduce your problem. After reading lines 12-15 in the report I understand that you are using an old version of bash, i.e. from 2008. For your problem shell version should be 4.1.5. If you look at the Environment section of the report you will see this: VERSION (for bash): 2.05b If this is your problem you have to upgrade your bash. EDIT For what it worth, the following works: wget -O liblog.txt for line in \$(cat liblog.txt | grep 'Configure terminal emulator. SSH telnet' | grep -oP '[A-Za-z0-9-]+' | awk '{ print \$1 }' | cut -d" " -f1) ; do curl -O gunzip -o Operation-Log-Setup.txt.gz wget -c wget -c mv liblog.txt /usr/local/opennms/logs rm -f Operation-Log-Setup.txt.gz mv Operation-Log-Setup.txt.gz liblog.txt rm -rf Operation-Log-Setup.txt.gz done mv liblog.txt /usr/local/opennms/logs In my opinion, this is definitely better than doing a manual bash upgrade which requires you to switch to the terminal. EDIT 2 To expand the folder /usr/local/opennms/logs with tar -zxvf /home/username/Desktop/Operation-Log-Setup.txt.gz instead of tar -zxvf /usr/local/openn
