Three years ago, a report from the Australian government assessed the impact of smartphones and other mobile phones on the eyes. The resulting report said there were no short term risks from cell phone use, and that, in the long term, research was inconclusive on the risks of blue light exposure. The study said “the evidence on the possible adverse effects of blue-rich, blue-blocking or shorter-wavelength light on human eyes and other parts of the body was considered insufficient.” This week the UK Met Office said in its annual report on temperature rises that cellphones should be banned at night and children should have less screen time. But a study of Australian children has found no impact on their vision from exposure to blue light from screens, which contradicts the UK Met Office report. The study, published in the journal *Ophthalmology* on Tuesday, is the first to examine the impacts of prolonged and high levels of exposure to blue light on children’s eyes. The results are consistent with US studies, although the methods used in the UK study were somewhat different. Study leader Dr Philip Cheung, a postdoctoral fellow at the Murdoch Childrens Research Institute, said the results were surprising. “We found no adverse effect on the vision of young children from levels of blue light exposure found in normal use of smartphones, tablets and laptops,” he said. “In fact, we found that prolonged exposure to blue light, such as on screen use in the evening, may be beneficial to young children’s sleep.” The study examined 437 children aged 10 to 13 and determined the levels of blue light exposure they received from a range of electronic devices. The children were then examined by an eye doctor to determine if they had any eye problems. They found that the children’s exposure to blue light from devices was well below any recommended limits. The study found that the amount of time children spent with their eyes looking at devices was not linked to eye problems. However, the study did find that increased exposure to blue light – at a level well below what most Australian children are exposed to – was associated with poorer sleep. “Blue

## What's New In AutoCAD?

Email notifiers: Get notified when your drawings are out for review. Time your changes to the latest delivery date. Email or SMTP notifications are built in. Create 2D wireframes from Inventor. Bring 3D surfaces into 2D: Create two-dimensional (2D) representations of three-dimensional (3D) geometry and surfaces. This capability allows you to visualize your design before building it. See all AutoCAD objects in your model with features like Label Mapping. The topology of many 3D objects is different from the 2D perspective. Use two-dimensional topology to better understand how a 3D model is built. Importer Improvements: A single drawing can be imported as a group of multiple parts. The new tool kit can import files from over 200 file types, including PDF and drawing files created with other CAD systems. Unified Navigator: The Navigator shows you what's on top of each other in a single view. The Navigator gives you a bird's eye view of the drawing and even lets you see how objects are connected to each other. The Navigator also shows you what's below the surface of your model, such as air, water, earth, and so on. Airspace Navigator: Draw and edit airspace tools. Merge, Split, and Delete Airspace Objects. Replace or export airspace objects to other formats. Help features for more help with the airspaces: Highlight an airspace for easy navigation. See additional airspaces above the model. Remesh a model in an airspace. Find airspaces that are not currently visible on your model. Dimensional Viewer: Display 2D, 3D, and measurement information for your model. The Dimensional Viewer shows how your model appears in 2D and 3D. Measure objects: Dimension your model. Mark the dimensions of any object. Record dimensions for templates and drawing scales. Measure a relationship: Measure the dimensions of the line or arc that represents a relationship. Identify which part of the object is over the other in a relationship. Obtain a snap point on the edge of a dimension. Define your drawing scale:
