Mac programs often include a serial number or CD-key that you will need to register and activate the program before use. This is simply a number or string of characters used to identify the program and protect it from. You may have to ask your computer manufacturer or software company. Read more. Softpedia forums. IÂ .Surgical access to the third ventricle in children with congenital hydrocephalus. Our aim was to report our experience with surgical access to the third ventricle in children with congenital hydrocephalus. We retrospectively reviewed the clinical data and surgical records of children with hydrocephalus who underwent surgical access to the third ventricle and neural tube for endoscopic third ventriculostomy (ETV) or ventriculoperitoneal shunt (VPS) between 2006 and 2016. The mean age at surgery was 14.8 ± 17.0 months (range, 1-92 months). The mean follow-up was 36.0 ± 37.0 months (range, 2-148 months). None of the patients had recurrence of their congenital hydrocephalus during the follow-up period. Twenty-five percent of patients had improvement of their irritability symptoms, and 58% of patients achieved improvement in their hyperactivity. None of the patients had perioperative or follow-up motor disturbances. Two patients had obstructive hydrocephalus. Twenty-five percent of patients had postoperative postural drainage.

The complication rates were as follows: CSF leak, 26%; wound infection, 8%; surgical site infection, 2%; fever, 2%; redo because of recurrent fever, 8%. The preoperative mean Dandy-Walker score was 10.4 ± 2.1 , and the postoperative mean Dandy-Walker score was 9.0 ± 2.4 ($p=0.0002$). Forty-four percent of patients required ETV. The mean operation time was 75.4 ± 36.2 minutes, and the mean blood loss was 0.9 ± 0.6 mL. The mean hospital stay was 7.3 ± 2.7 days. No significant difference was found between the ETV and VPS groups regarding mean operation time, blood loss, hospital stay, postoperative drainage 6d1f23a050
