One type of camera sensor comprises pixels that are relatively insensitive to light that is incident from a distance, and therefore useful for capturing still images. Another type of camera sensor

comprises pixels that have relatively high sensitivity to light that is incident from a distance, and therefore useful for capturing video. For example, a conventional digital camera comprises a photosensitive imaging array comprising CCD image sensors, which is contained within a housing of the digital camera, and which is typically located on a printed circuit board within the digital camera. A lens of the digital camera is located to image light onto the photosensitive array. This is known as "front-side" imaging. The photosensitive array within the digital camera is typically located towards the front of the housing of the digital camera. When taking a picture, the digital camera is typically held by the user c6a93da74d
