Xp.Many different types of printing have been
invented, a large number of which are presently in
use. Known forms of printers have a variety of
methods for marking the print media with a relevant
marking media. Commonly used forms of printing
include offset printing, laser printing and copying
devices, dot matrix type impact printers, thermal
paper printers, film recorders, thermal wax printers,
dye sublimation printers and ink jet printers both of
the drop on demand and continuous flow type. Each
type of printer has its own advantages and problems
when considering cost, speed, quality, reliability,
simplicity of construction and operation etc. In
recent years, the field of ink jet printing, wherein
each individual pixel of ink is derived from one or
more ink nozzles has become increasingly popular
primarily due to its inexpensive and versatile
nature. Many different techniques of ink jet printing
have been invented. For a survey of the field,
reference is made to an article by J Moore, “Non-

Impact Printing: Introduction and Historical Perspective”, Output Hard Copy Devices, Editors R Dubeck and S Sherr, pages 207-220 (1988). Ink Jet printers themselves come in many different forms. The utilization of a continuous stream of ink in ink jet printing appears to date back to at least 1929 wherein U.S. Pat. No. 1,941,001 by Hansell discloses a simple form of continuous stream electro-static ink jet printing. U.S. Pat. No. 3,596,275 by Sweet also discloses a process of a continuous ink jet printing including the c6a93da74d
